

DNA Fusion & Zenitel AlphaCom Integration

The Voice of Access Control

zenitel

BECAUSE
when communication is critical

Integrated Audio Benefits

- Best-of-breed open platform application for access control and communications
- Audio verification before granting access in a facility
- Full reports and audit trail on all calls and announcements
- Interplay between systems:
 - Card read/intercom message
 - Intercom/video
- Single unified interface
- Ability to plot audio substations on graphic maps in DNA Fusion
- Managed integration ensures version compatibility

Overview

The role of intelligent communications in completing the common operating picture of the organization is necessary if budget optimization, situational awareness and actionable response are priorities.

Security operators can now leverage the fusion of command, control, and intelligent communications with the seamless integration of these best-in-breed applications.

By tapping into one of the Vingtor-Stentofon core design values of interoperability, Zenitel's enterprise communication server, AlphaCom, integrates with DNA Fusion to provide an integrated platform for access control and critical communications. Security teams are now able to communicate bi-directionally with individuals across a facility or campus optimizing their processes and their actionable response to incidents.

Verify identity by showing access control events and cardholder images along with associated audio verification, and video with Zenitel's HD Video stations.

Features in DNA Fusion

Easy Calling

Click on a button or a map icon to place or answer a call

Receive Events

AlphaCom events are recorded in DNA Fusion logs for extensive reporting capabilities

Associating Events

Use host macros to take action in DNA Fusion based on AlphaCom events

Intercom State

View change of state when station is in use

Emergency Notification

An alarm generated in DNA Fusion can initiate notification to the AlphaCom system in an emergency

Audio on Graphics

Display visually through the facility diagram/graphic map, every voice notification ensuring rapid response.

Additional Features

Audio and Video Verification

Monitor unmanned points utilizing IP door stations for both audio and video verification

Public Address

Achieve the same functionality of public address system by utilizing "All" and "Group call" features in AlphaCom

Managed Integration

Ensuring the integration is part of a strategic program to ensure version compatibility
